

Ashes or Stones?

Cremated remains are messy and cause anxiety for caretakers. Solidified remains are a clean form of human remains that allow you to live comfortably with your departed.

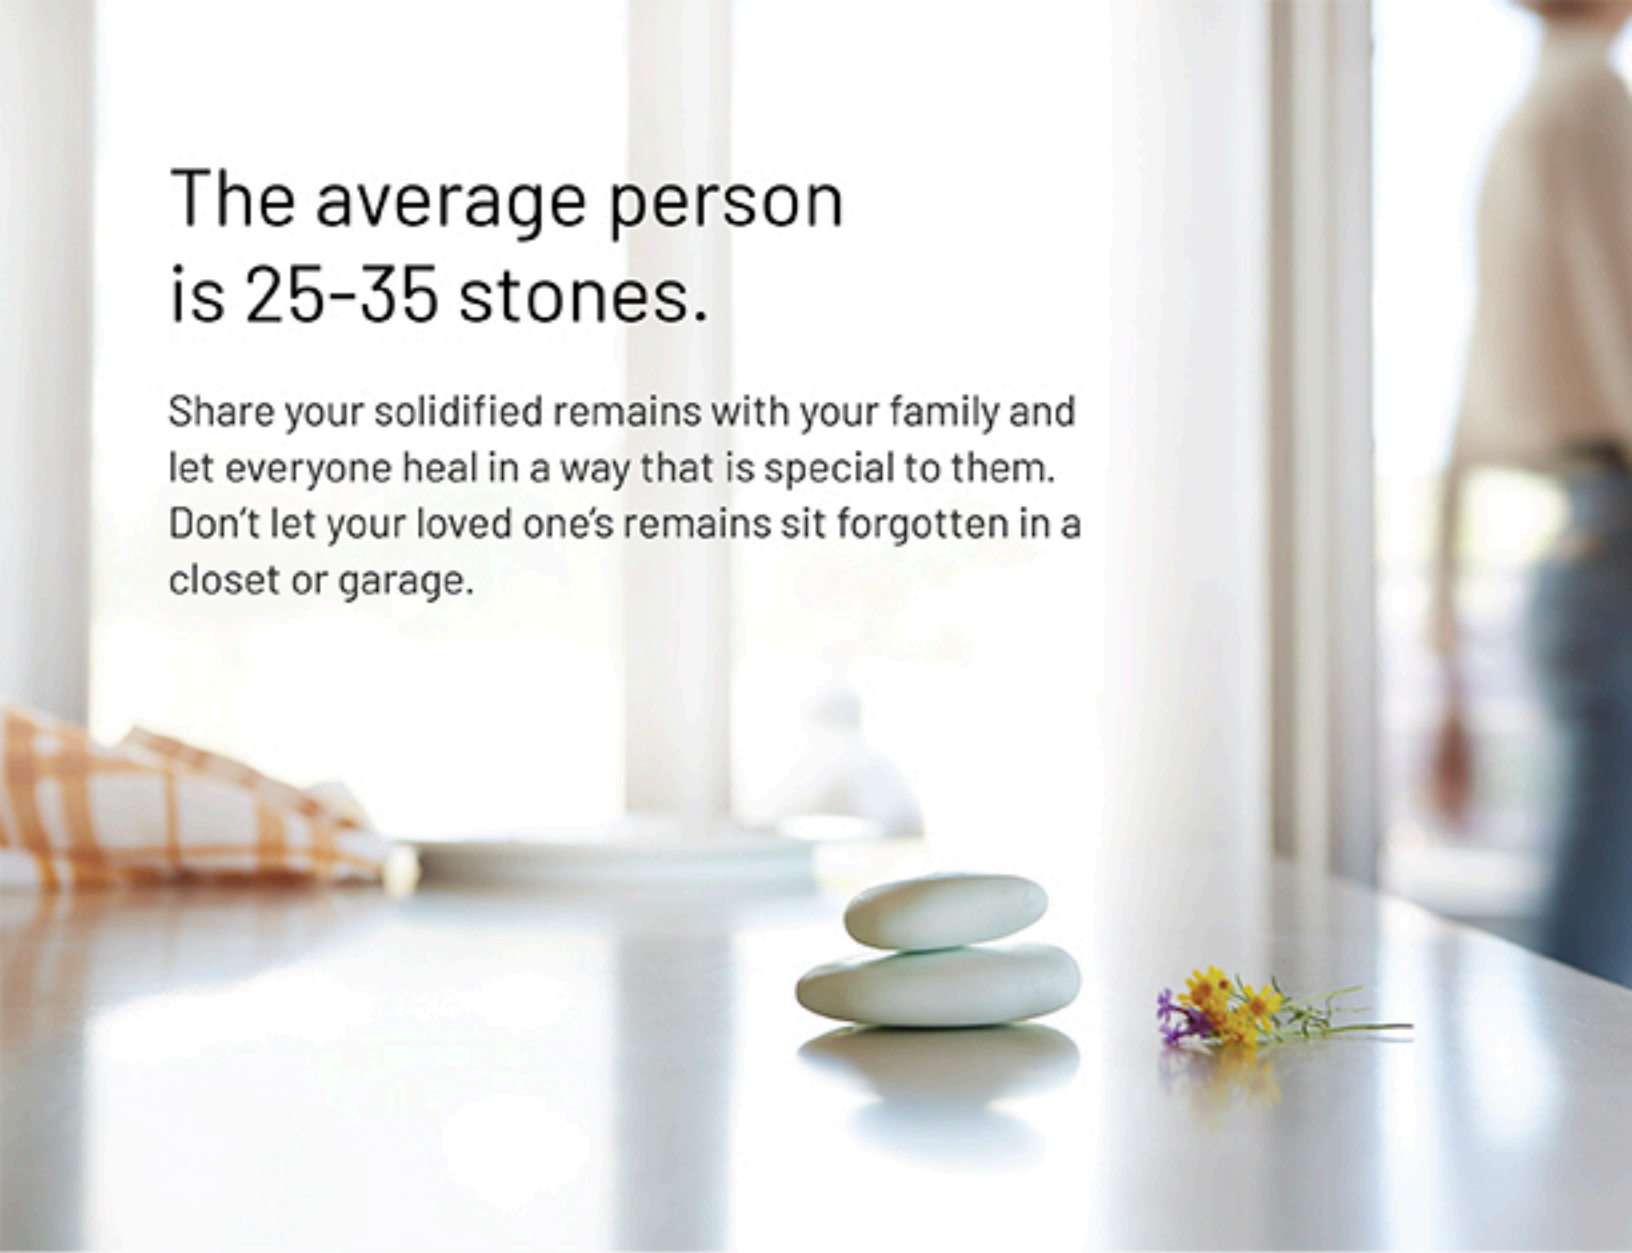

Remains that
feel meaningful.

Parting Stone™ solidified remains let you feel close and connected to your loved one in daily life.

The average person
is 25-35 stones.

Share your solidified remains with your family and
let everyone heal in a way that is special to them.
Don't let your loved one's remains sit forgotten in a
closet or garage.

What color are your stones?

The color of each person's solidified remains is 100% natural.

Many people result in white stones, but some are a hue of
blue, green, or a radical variation.

The Science

Parting Stone™ Solidified Remains

Step 1: Purification

We remove foreign contaminants like staples and screws from the cremated remains. The granule ash is refined into a powder.

Step 2: Stone Forming

The solidification process is similar to making ceramics. A small amount of binder is added to the ash, the remains are mixed into a clay-like material, and the stones are formed.

Step 3: Solidification

The stones are fired in a kiln giving the solidified remains their hardness and permanence.

Step 4: Return Home

Finished Parting Stone™ solidified remains are cleaned and polished. Your stones are ready to come home and be shared with your family.

PARTING STONE™
